## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian Epstein on 11/03/2009.

### **IN THE CLAIMS**

Claim 50 should be cancelled.

### ***Allowable Subject Matter***

1. Claims 26-38 are allowed over the prior art of record in light of the amendments and arguments submitted 08/07/2009 and the examiner's amendment authorized on 11/03/2009.
2. The following is an examiner's statement of reasons for allowance: The prior art of record fails to either show or reasonably suggest a method of depositing a functional film on a glass sheet wherein the film coating station has multiple reels of film and an upper and lower roll of film is adjusted to set aside margins on the opposing edges of

the substrates and wherein the film is applied as a strips on the substrate in varying locations.

3. Regarding claim 26, the closest prior art of record is Washizaki (EP 0547327A1), which discloses a general method of applying a functional film to a substrate via a similar apparatus which uses different axis's, leaders, reels, blades and rollers as in the present invention. Washizaki fails, however, to disclose the use of multiple rolls, the act of adjusting the rolls to set aside margins on the opposing edges of the substrate, does not teach varying the location of the film strips on the substrate and more importantly does not teach applying the film to glass sheets. Washizaki teaches a similar film applying method though such is drawn to the application of functional film to circuit boards rather than glass sheets. Tutor (GB 2033947) discloses the application of functional films to glass substrates such as windshields. Though both are drawn to film application methods they are drawn to different fields (circuits and automobiles) and it would not have been obvious to combine one with the other absent further suggestions in the prior art. Even if the argument can be made that they can be combined the combination would still be deficient in teaching the use of multiple rolls, the act of adjusting the rolls to set aside margins on the opposing edges of the substrate and the act of varying the location of the film strips on the substrate. Absent further hints in the prior art, these differences would not have been obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
